

PRODUCT OVERVIEW

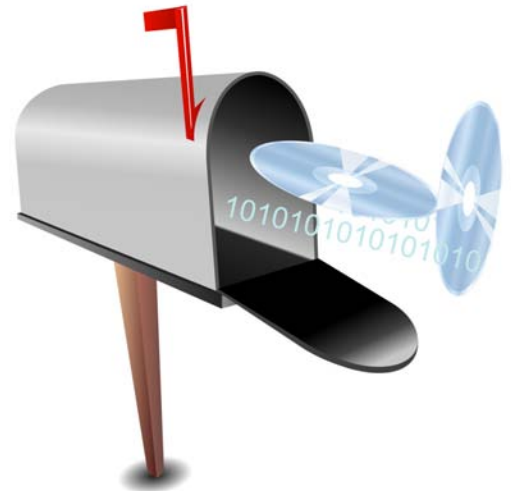

MailDepot[®] - Automated Mail Processing Solution

The future of mail processing with automated mail sorting and threat detection capabilities; facilitating fast, accurate information management

MailDepot[®] is an advanced system that uses expert technology to automate mail processing for fast and accurate information management. This system uses cutting edge technology to sort and route mail automatically, auto populate a database with extracted information, and archive mail for records purposes. This innovative business solution helps mail systems keep up with a world of automated information, where we can instantly be in contact with people and have information at our fingertips.

MailDepot[®] is a cost effective way to reduce mail processing time and make the mail processing system more efficient. MailDepot[®] uses expert technology to sort mail and extract important information, enabling people to access their mail more quickly, without waiting for it to arrive physically through the postal system. MailDepot[®] identifies threats and redacts sensitive information to ensure both security and privacy.

ECOMPEX's MailDepot[®] will help make sorting mail and detecting threats easier and quicker for more efficient delivery of information.

Automated Mail Processing

- Automated Mail Categorization
- Automated Mail Routing
- Electronic Archiving Capabilities

Automated Database Population

- Expert Data Extraction
- Expert Data Validation

Automated Threat Detection

- Coordinates with Federal databases to detect suspicious mail
- Alerts and separates out possible threats

Automated Redaction

- Protects Personal Information
- User Level-Based Viewing of Information

- Remote Mail Distribution
- Expert Data Extraction and Validation
- Protects Personal Information
- User Level-Based Viewing of Information
- Coordinates with Federal Databases
- Alerts and Separates Possible Threats
- Electronic Archiving Capabilities
- Automates Categorization and Routing
