

PRODUCT OVERVIEW

eDocWare® - Production Imaging, Collaboration, & Workflow Solution

Production Workflow Imaging System Including Scanning, Refinement, Quality Control, and Delivery

eDocWare® is a state-of-the-art imaging system developed by ECOMPEX as a cost effective solution for high volume document conversion. Developed with Visual C++ and Java technologies, eDocWare® is the ultimate production imaging system supporting all twain compliant scanners.

Intelligent Production Module Design

The eDocWare® software is a workflow-based production imaging system featuring box and document tracking; scanning of all types of source materials including large format drawings, microfiche, and microfilm; image refinement; image quality control; and multi-format delivery - with the capability of handling half a million records of sensitive information per day. eDocWare's® intelligent design transforms the way documents and records are shared in order to enable more effective team collaboration.

Scan Module

- Document preparation, batch scanning, and quality control
- Multi-Image display shows multiple images at the same time
- Integrates easily with other systems by using pure text index file
- Export capabilities that deliver conversion output into other document management systems

Image Refinement Module

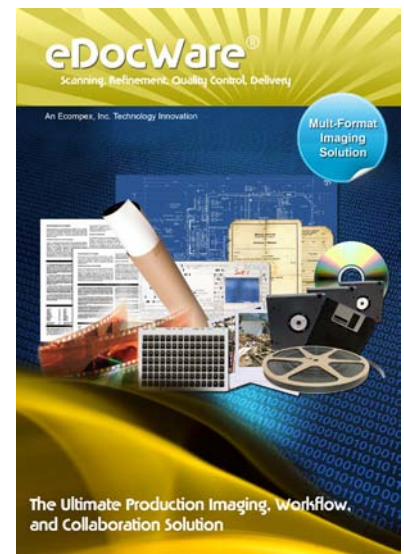

- Image cleanup and intelligent image processing
- Supports rich functions of deskew, cropping, rotation, and despeckle
- Image merge and image split can be easily added

Quality Control Module

- Image quality assurance and image rescan (batch and/or individual)
- Merges image quality control and rescan into one, eliminating system complexity and increasing productivity
- Quality control and rescan can be used separately
- Provides for accountability tracking during the QC process

Image Delivery Module

- Image indexing and image export
- Flexibility to output to various medias such as CD, DVD, Internet, & other records management systems

- Barcode Recognition
- Multi-Image Display
- Easy Integration with Other Systems
- Supports Deskew, Cropping, & Despeckle
- Accountability Tracking during QC process
- Flexibility to Output to Various Media Types
- Requires no Special Hardware
- Includes Auto Filing Hierarchy
